

The concept of psychology

РЕПОЗИТОРИЙ БГПУ

**Psychology-the science of the
laws of development and
functioning of the psyche as a
special form of life.**

РЕПОЗИТОРИЙ БГУ

Psychology - the scope of knowledge about the psyche of humans and animals, that is, the forms of activity, display, regulation, by which living beings realize themselves in existence.

The psyche is a form of active reflection by the subject of objective reality, arising in the process of interaction of highly organized living beings with the outside world and carrying out their behavior (activity) regulatory function.
