The article describes the directions of formation of professional competence in future managers of tourism and features of application in practice.

Наиболее динамично развивающейся составляющей рынка услуг является туристический рынок, о чем свидетельствует рост удельного веса туризма в мировом экспорте-импорте услуг, увеличение поступлений от международного туризма, рост его доли в формировании ВВП стран, увеличение численности занятых в этой сфере. Все эти факторы обуславливают необходимость исследования тенденций и закономерностей развития туристического рынка, идентификации его ключевых участников, анализа смены позиций основных экспортеров и импортеров данного вида услуг [2].

С позиции качественных характеристик процесс глобализации экономики рассматривается как новый этап в развитии цивилизации, который характеризуется усилением взаимосвязей и взаимозависимостей между национальными хозяйствами и различными сферами их деятельности.

Увеличение туристических потоков сопровождается серьезными изменениями в социально-экономической, финансовой, научно-технической и других сферах общественной жизни человека [1].
